

Concepts Beyond Examiner © Features

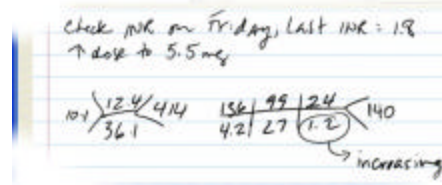

Examiner is a software tool that helps introduce medical students to performing history and physical examinations and guides them through the interview and examination sequence.

Ideal for First-year and second-year medical students being introduced to physical exams and writing SOAP notes.

Guide for Performing Examinations

Within each system, a summary of what to inspect, palpate, percuss, and auscultate guides the student through the examination sequence. Guide also includes items to note such as tenderness and dullness to remind them what to look for.

Templates help provide students with a consistent format for taking notes.

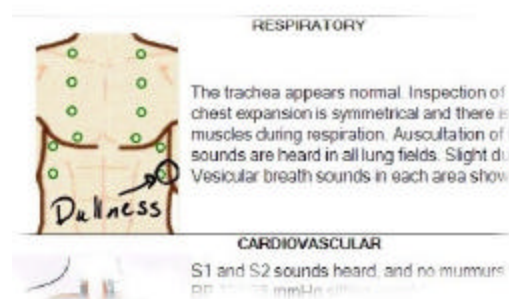

Fast, Handwritten Notes

Draw diagrams and write your SOAP notes and H&P using a Tablet PC instead of typing. Examiner harnesses the convenience of the Tablet PC, allowing for handwriting recognition and drawings without the cumbersome letters of a handheld device.

Examiner can also work on non-Tablet PC systems with a keyboard.

Markup Diagrams

Diagrams of each system are included along with the examination sequence, and can be annotated directly on the diagram to identify areas that are abnormal or require additional explanation.

Patient Positions & Contextual Help

The patient's position for examination of each system is indicated along with the diagram of the system. Contextual help spells out abbreviations used, and provides additional help such as normal ranges of certain measures.

Medical Abbreviations

Comprehensive list of over 1,000 medical abbreviations and symbols help students quickly lookup and learn abbreviations.

Report Complete with Diagrams

Once the interview and examination are complete, generate a report based on your inputs, broken down into each history section and physical exam system.

Examiner's easy to use, informative guides combined with note-taking capability provide a unique way for students to quickly learn to perform thorough, professional interviews and examinations.
